- Daisy power electric rollers
- Retro kits available
- Battery powered AC charge + solar models

ELECTRIC ROLLERS

The Daisy Power is our newest roller in the Showcase range, designed to look good while offering customers the convenience of an electric roller.

The standard Daisy Power roller comes as a battery operated electric roller with AC charger, two remotes and control buttons on the cast aluminium housing mounted on the end frame.

This simple and easy to use electric option allows pool owners to roll up their cover in minutes with the press of a button – something our customers have been waiting for.

Daisy Power also has a disengage mechanism, which allows for free-wheeling rollout and rollup of the cover, and is a feature unique to Daisy.

The standard Daisy Power is competitively priced at \$1245 for a complete roller up to 5.2m. With the normal ST roller retailing for \$579, and the FM at \$676, this is a small price difference for a lot more convenience.

Optional extras for Daisy Power include a solar panel, which clamps to the end frame and comes with an aligning aid for best performance. This maintains the battery charge using the sun's rays, meaning your Daisy Power roller is always ready to go!

Customers can also purchase a PV post to mount the panel on a post away from the roller frame.

Daisy Power can be retrofitted onto all existing 100mm Daisy Rollers through a retro kit

Daisy Power style options include the standard height ST roller, squat profile, wall mount and solar panel kit.

For more information about the Power Roller, contact the Daisy team today.

Code	Description	Retail Price
DPST1250	ST retro kit to install to existing ST height roller	\$980.00
DPST52	Complete ST Daisy power roller assembly up to 5.2m	\$1245.00
